

Trade Calculator

USER GUIDE

This guide walks through every button and field in the Trade Calculator. Each section matches a real screenshot, filled in with example numbers, so you can see exactly what it looks like in use.

The calculator lives near the bottom of the checklist, collapsed by default. Tap its header to expand it.

CLEAR CALCULATOR

The Trade Calculator, ready to use.

1 Contract Size & Instrument

A Contract Size tabs

These three tabs pick which size class of futures contract you're working with. **Micro** is the size most retail accounts use. **E-mini** is roughly 10× larger than Micro. **E-nano** is roughly 10× smaller than Micro.

B Instrument buttons

Pick the specific contract you're trading. The options change depending on the Contract Size tab selected. Gold has no E-nano version, so it won't appear on that tab.

C The dark instrument card

Shows full details for the selected instrument: its full name, exchange, Point Value, and the exact tick size / tick value it's built from. Updates instantly on any change.

D Number of Contracts

Set how many contracts you plan to trade. Every dollar figure elsewhere in the calculator scales automatically to match this number.

The screenshot shows a trading calculator interface with the following elements:

- A CONTRACT SIZE:** Three tabs labeled "E-mini", "Micro" (selected), and "E-nano".
- B INSTRUMENT:** Four buttons labeled "MNQ", "MES", "MGC", and "MYM". "MNQ" is selected.
- C The dark instrument card:** A dark card displaying "MNQ", "MICRO NASDAQ-100", "POINT VALUE \$2.00", and "CME · Tick 0.25 = \$0.50".
- D NUMBER OF CONTRACTS:** A section with a minus button, a text input field containing "1", and a plus button. Below this are three buttons: "Ticks / Points" (selected), "Price Levels", and "Position Size". Under "Ticks / Points" are two buttons: "Ticks" (selected) and "Points". Below these is a text input field labeled "Enter amount".
- Summary:** A large dark box showing "\$0.00". Below it are two boxes: "PER CONTRACT \$0.00 single contract value" and "PER TICK \$0.50 \$0.50 × 1 contract". At the bottom is a "CLEAR CALCULATOR" button.

Tap any tab or button to see it change live.

2 Ticks / Points Mode

The calculator's default tab. Use it any time you want to know how many dollars a certain number of ticks or points is worth.

A Ticks / Points toggle

Choose your unit. A **tick** is the smallest possible price move for that contract. A **point** is a full 1.00 price move, usually several ticks.

B Enter amount

Type in how many ticks or points to convert. The result updates as you type.

C The big dollar result

Your total dollar value across **all** your contracts, from the Number of Contracts field.

D Per Contract / Per Tick

Per Contract shows the value for a single contract only. **Per Tick** shows the value of just one tick/point move across your whole position.

The image shows a calculator interface for "Ticks / Points Mode". It features several sections: "CONTRACT SIZE" with buttons for E-mini, Micro (selected), and E-nano; "INSTRUMENT" with buttons for MNQ (selected), MES, MGC, and MYM; a central display showing "MNQ", "MICRO NASDAQ-100", and "POINT VALUE \$2.00"; "NUMBER OF CONTRACTS" with a minus button, a text input field containing "1", and a plus button; three tabs: "Ticks / Points" (selected), "Price Levels", and "Position Size"; a sub-tab selector with "Ticks" (selected) and "Points"; a large text input field containing "40"; a large result display showing "\$20.00"; and two smaller result boxes: "PER CONTRACT \$20.00 single contract value" and "PER TICK \$0.50 \$0.50 x 1 contract". A "CLEAR CALCULATOR" button is at the bottom. Annotations A, B, C, and D point to the "Ticks / Points" tab, the input field "40", the "\$20.00" result, and the "PER CONTRACT" and "PER TICK" boxes respectively.

CLEAR CALCULATOR

Example: 40 ticks on 1 MNQ contract.

3 Price Levels Mode

Use this tab to plan an actual trade. Type in your real price levels and let the calculator handle the risk and reward math.

A Entry Price / Stop Price

The calculator figures out whether you're long or short based on which side your stop is on.

B Quick Target (R : R)

Tap 1:1, 1:2, 1:3, or 1:4 and Target Price fills in automatically, placed the correct distance and direction. The tapped button stays highlighted.

C Target Price

Fills in automatically from a Quick Target tap, or type your own number. Typing your own clears the highlight, since it may no longer match a clean ratio.

D Risk / Reward / R : R

Risk is your dollar loss if stopped out. **Reward** is your dollar gain at target. Both account for your Number of Contracts.

The screenshot shows a mobile application interface for a trading calculator. At the top, there are three tabs: 'E-mini', 'Micro' (which is highlighted in pink), and 'E-nano'. Below these are four instrument buttons: 'MNQ' (highlighted in pink), 'MES', 'MGC', and 'MYM'. A dark purple box displays 'MNQ' in large white letters, with 'MICRO NASDAQ-100' below it and 'POINT VALUE \$2.00' to the right. Below this box, it says 'CME · Tick 0.25 = \$0.50'. Underneath is a 'NUMBER OF CONTRACTS' section with a minus button, a text input showing '1', and a plus button. Below that are three buttons: 'Ticks / Points', 'Price Levels' (highlighted in green), and 'Position Size'. The main calculation area is divided into four sections, each with a lettered label on the left: 'A' for 'ENTRY PRICE' with a text input showing '19850'; 'B' for 'STOP PRICE' with a text input showing '19835'; 'C' for 'QUICK TARGET (R : R)' with three buttons '1:1', '1:2' (highlighted in orange), '1:3', and '1:4'; and 'D' for 'TARGET PRICE (OPTIONAL)' with a text input showing '19880.00'. At the bottom, there are three buttons: 'RISK \$30.00' (pink), 'REWARD \$60.00' (green), and 'R : R 1 : 2.00' (orange). A 'CLEAR CALCULATOR' button is at the very bottom.

Example: Entry 19850, Stop 19835, target 1:2.

4 Position Size Mode

This tab works backwards from the other two: it tells you how many contracts you're allowed to trade given your account size and risk tolerance, before you place the order.

A Account Balance

The account balance your risk rule is based on.

B Risk Per Trade (%)

The percentage of that balance you're willing to risk on this trade. A common rule of thumb is 1%.

C Stop Distance (Ticks)

How many ticks away your stop loss will be, once you know your setup.

D Max \$ Risk / Contracts / Actual \$ Risk

Contracts rounds *down* to a whole number, since you can't trade a partial contract, so **Actual \$ Risk** is usually a little less than your Max.

The screenshot shows a trading calculator interface for the MNQ instrument. At the top, 'CONTRACT SIZE' has buttons for E-mini, Micro (selected), and E-nano. 'INSTRUMENT' has buttons for MNQ (selected), MES, MGC, and MYM. A dark box displays 'MNQ', 'MICRO NASDAQ-100', and 'POINT VALUE \$2.00'. Below this, it says 'CME · Tick 0.25 = \$0.50'. The 'NUMBER OF CONTRACTS' is set to 1, with buttons for minus, plus, and a dropdown menu. The dropdown menu has options: Ticks / Points, Price Levels, and Position Size (selected). Below the dropdown, four input fields are labeled A, B, C, and D. Field A (ACCOUNT BALANCE) contains 25000. Field B (RISK PER TRADE (%)) contains 1. Field C (STOP DISTANCE (TICKS)) contains 20. Field D is a summary box with three columns: MAX \$ RISK (\$250.00), CONTRACTS (25), and ACTUAL \$ RISK (\$250.00). At the bottom is a 'CLEAR CALCULATOR' button.

CONTRACT SIZE	INSTRUMENT	POINT VALUE
E-mini	MNQ	\$2.00
Micro	MES	
E-nano	MGC	
	MYM	

MNQ
MICRO NASDAQ-100
CME · Tick 0.25 = \$0.50

NUMBER OF CONTRACTS: 1

Ticks / Points | Price Levels | Position Size

A ACCOUNT BALANCE: 25000

B RISK PER TRADE (%): 1

C STOP DISTANCE (TICKS): 20

D

MAX \$ RISK	CONTRACTS	ACTUAL \$ RISK
\$250.00	25	\$250.00

CLEAR CALCULATOR

Example: \$25,000 balance, 1% risk, 20-tick stop.

5 Saving & Clearing

How the calculator behaves between visits, and how to start fresh when you're ready.

A Everything saves automatically

Every field, in any of the three tabs, saves as you go. Closing the app, refreshing, or resetting your main checklist will **not** erase your calculator inputs. This is intentional, since you might still be mid-trade.

B Clear Calculator button

The only thing that wipes the calculator is tapping this button yourself. It resets every field back to Micro, MNQ, Ticks, and 1 contract.

The screenshot displays a trading calculator interface with the following elements:

- CONTRACT SIZE:** Three buttons labeled "E-mini", "Micro" (highlighted in pink), and "E-nano".
- INSTRUMENT:** Four buttons labeled "MNQ" (highlighted in pink), "MES", "MGC", and "MYM".
- Instrument Details:** A dark purple box containing "MNQ", "MICRO NASDAQ-100", and "CME · Tick 0.25 = \$0.50". To the right, "POINT VALUE" is shown as "\$2.00".
- NUMBER OF CONTRACTS:** A row with a minus button, a text input field containing "1", and a plus button.
- Calculation Method:** Three buttons labeled "Ticks / Points", "Price Levels", and "Position Size" (highlighted in green).
- ACCOUNT BALANCE:** A text input field containing "25000".
- RISK PER TRADE (%):** A text input field containing "1".
- STOP DISTANCE (TICKS):** A text input field containing "20" with a small up/down arrow icon on the right.
- Risk Summary:** Three colored boxes at the bottom: an orange box for "MAX \$ RISK" with "\$250.00", a pink box for "CONTRACTS" with "25", and a green box for "ACTUAL \$ RISK" with "\$250.00".
- Clear Button:** A large white button with a black border labeled "CLEAR CALCULATOR" at the very bottom, marked with a circled "B".

The Clear Calculator button, at the very bottom.
