

Trade Calculator

USER GUIDE · DARK MODE

This guide walks through every button and field in the Trade Calculator. Each section matches a real screenshot, filled in with example numbers, so you can see exactly what it looks like in use.

The calculator lives near the bottom of the checklist, collapsed by default. Tap its header to expand it.

The Trade Calculator, ready to use.

1 Contract Size & Instrument

A Contract Size tabs

These three tabs pick which size class of futures contract you're working with. **Micro** is the size most retail accounts use. **E-mini** is roughly 10× larger than Micro. **E-nano** is roughly 10× smaller than Micro.

B Instrument buttons

Pick the specific contract you're trading. The options change depending on the Contract Size tab selected. Gold has no E-nano version, so it won't appear on that tab.

C The instrument card

Shows full details for the selected instrument: its full name, exchange, Point Value, and the exact tick size / tick value it's built from. Updates instantly on any change.

D Number of Contracts

Set how many contracts you plan to trade. Every dollar figure elsewhere in the calculator scales automatically to match this number.

The image shows a mobile application interface for a futures contract calculator. It features four main sections highlighted with yellow circles and letters A, B, C, and D. Section A shows three tabs: 'E-mini', 'Micro' (selected), and 'E-nano'. Section B shows three instrument buttons: 'MNQ' (selected), 'MES', and 'MGC'. Section C shows a card for the selected instrument 'MNQ', which is 'MICRO NASDAQ-100'. It displays a 'POINT VALUE' of '\$2.00' and a 'CME · Tick 0.25 = \$0.50'. Section D shows a 'NUMBER OF CONTRACTS' input field with a value of '1'. Below this are three tabs: 'Ticks / Points' (selected), 'Price Levels', and 'Position Size'. Under 'Ticks / Points', there are two buttons: 'Ticks' (selected) and 'Points'. Below these is an 'Enter amount' input field. At the bottom, there is a large display showing '\$0.00'. Below this are two boxes: 'PER CONTRACT' showing '\$0.00' (single contract value) and 'PER TICK' showing '\$0.50' (\$0.50 × 1 contract). At the very bottom, there is a 'CLEAR CALCULATOR' button and a link to 'View User Guide (PDF)'.

Tap any tab or button to see it change live.

2 Ticks / Points Mode

The calculator's default tab. Use it any time you want to know how many dollars a certain number of ticks or points is worth.

A Ticks / Points toggle

Choose your unit. A **tick** is the smallest possible price move for that contract. A **point** is a full 1.00 price move, usually several ticks.

B Enter amount

Type in how many ticks or points to convert. The result updates as you type.

C The big dollar result

Your total dollar value across **all** your contracts, from the Number of Contracts field.

D Per Contract / Per Tick

Per Contract shows the value for a single contract only. **Per Tick** shows the value of just one tick/point move across your whole position.

The image shows a digital calculator interface for futures trading. It has a dark theme with blue and orange accents. The interface is divided into several sections: CONTRACT SIZE (E-mini, Micro, E-nano), INSTRUMENT (MNQ, MES, MGC, MYM), and a main calculation area. The main area displays 'MNQ' (MICRO NASDAQ-100) with a 'POINT VALUE' of '\$2.00'. Below this, it shows 'CME · Tick 0.25 = \$0.50'. The 'NUMBER OF CONTRACTS' is set to '1'. There are three tabs: 'Ticks / Points' (selected), 'Price Levels', and 'Position Size'. Under 'Ticks / Points', there are two sub-tabs: 'Ticks' (selected) and 'Points'. The input field for 'Ticks' contains the number '40'. The main result area displays '\$20.00'. At the bottom, there are two boxes: 'PER CONTRACT' showing '\$20.00' (single contract value) and 'PER TICK' showing '\$0.50' (\$0.50 x 1 contract). A 'CLEAR CALCULATOR' button and a 'View User Guide (PDF)' link are at the very bottom.

3 Price Levels Mode

Use this tab to plan an actual trade. Type in your real price levels and let the calculator handle the risk and reward math.

A Entry Price / Stop Price

The calculator figures out whether you're long or short based on which side your stop is on.

B Quick Target (R : R)

Tap 1:1, 1:2, 1:3, or 1:4 and Target Price fills in automatically, placed the correct distance and direction. The tapped button stays highlighted.

C Target Price

Fills in automatically from a Quick Target tap, or type your own number. Typing your own clears the highlight, since it may no longer match a clean ratio.

D Risk / Reward / R : R

Risk is your dollar loss if stopped out. **Reward** is your dollar gain at target. Both account for your Number of Contracts.

The screenshot shows the 'Price Levels Mode' calculator interface. It includes sections for 'CONTRACT SIZE' (E-mini, Micro, E-nano), 'INSTRUMENT' (MNQ, MES, MGC, MYM), and 'POINT VALUE' (\$2.00). The 'NUMBER OF CONTRACTS' is set to 1. The 'ENTRY PRICE' is 19850 and the 'STOP PRICE' is 19835. The 'QUICK TARGET (R : R)' section shows 1:1, 1:2 (highlighted), 1:3, and 1:4. The 'TARGET PRICE (OPTIONAL)' is 19880.00. The 'RISK' is \$30.00, 'REWARD' is \$60.00, and 'R : R' is 1 : 2.00. A 'CLEAR CALCULATOR' button and a 'View User Guide (PDF)' link are at the bottom.

4 Position Size Mode

This tab works backwards from the other two: it tells you how many contracts you're allowed to trade given your account size and risk tolerance, before you place the order.

A Account Balance

The account balance your risk rule is based on.

B Risk Per Trade (%)

The percentage of that balance you're willing to risk on this trade. A common rule of thumb is 1%.

C Stop Distance (Ticks)

How many ticks away your stop loss will be, once you know your setup.

D Max \$ Risk / Contracts / Actual \$ Risk

Contracts rounds *down* to a whole number, since you can't trade a partial contract, so **Actual \$ Risk** is usually a little less than your Max.

The screenshot shows a trading calculator interface. At the top, 'CONTRACT SIZE' has buttons for 'E-mini', 'Micro' (selected), and 'E-nano'. Below, 'INSTRUMENT' has buttons for 'MNQ' (selected), 'MES', 'MGC', and 'MYM'. A section for 'MNQ' shows 'MICRO NASDAQ-100' and 'POINT VALUE \$2.00', with a note 'CME · Tick 0.25 = \$0.50'. The 'NUMBER OF CONTRACTS' is set to '1' with minus and plus buttons. Below this are three tabs: 'Ticks / Points', 'Price Levels', and 'Position Size' (selected). A vertical line with annotations A, B, C, and D points to specific input fields: A points to the 'ACCOUNT BALANCE' field (25000), B points to the 'RISK PER TRADE (%)' field (1), C points to the 'STOP DISTANCE (TICKS)' field (20), and D points to the output section. The output section shows 'MAX \$ RISK \$250.00', 'CONTRACTS 25', and 'ACTUAL \$ RISK \$250.00'. At the bottom are buttons for 'CLEAR CALCULATOR' and 'View User Guide (PDF)'.

Field	Value
ACCOUNT BALANCE	25000
RISK PER TRADE (%)	1
STOP DISTANCE (TICKS)	20
MAX \$ RISK	\$250.00
CONTRACTS	25
ACTUAL \$ RISK	\$250.00

Example: \$25,000 balance, 1% risk, 20-tick stop.

5 Saving & Clearing

How the calculator behaves between visits, and how to start fresh when you're ready.

A Everything saves automatically

Every field, in any of the three tabs, saves as you go. Closing the app, refreshing, or resetting your main checklist will **not** erase your calculator inputs. This is intentional, since you might still be mid-trade.

B Clear Calculator button

The only thing that wipes the calculator is tapping this button yourself. It resets every field back to Micro, MNQ, Ticks, and 1 contract.

The screenshot shows a trading calculator interface with the following sections and values:

- CONTRACT SIZE:** E-mini, **Micro**, E-nano
- INSTRUMENT:** **MNQ**, MES, MGC, MYM
- MNQ Details:** MICRO NASDAQ-100, POINT VALUE **\$2.00**, CME · Tick 0.25 = \$0.50
- NUMBER OF CONTRACTS:** - 1 +
- Positioning:** Ticks / Points, Price Levels, **Position Size**
- ACCOUNT BALANCE:** 25000
- RISK PER TRADE (%):** 1
- STOP DISTANCE (TICKS):** 20
- Summary:** MAX \$ RISK **\$250.00**, CONTRACTS **25**, ACTUAL \$ RISK **\$250.00**
- Buttons:** **B** CLEAR CALCULATOR, View User Guide (PDF)

The Clear Calculator button, at the very bottom.
